Derrick Lin

San Francisco, CA | 650-773-5687 | derricklin0925@gmail.com | LinkedIn | GitHub | Portfolio

EDUCATION

Boston University **Expected: May 2028**
Master of Science in Computer Science and Artificial Intelligence

University of California, San Diego **September 2025**
Bachelor of Science in Computer Engineering and Cognitive Science (Machine Learning & Neural Computation) | GPA: 3.3
Relevant Courses: Software Engineering, Data Structures/Algorithms, Machine Learning, Operating Systems
Academic Awards: Provost Honors (3x), Synthesis Microgrant Award

WORK EXPERIENCE

Amazon| *Software Development Engineer (Big Data Technology - eCF)* | *Seattle, WA* **June 2026 – Present**
- Sole owner of an **org-level goal** to ship two production **Rust** CLIs (Smithy/smithy-rs generated client, clap, tokio) replacing a Java GraalVM build. **17 merged Cars across 6 packages**, delivered against a launch date pulled in ~6 weeks
- Built an onboarding **AI agent** that automates HubSchema environment setup, cutting customer onboarding time by **75%** from 8 hours to under 2

TipTop Technologies | *Software Engineer* | Sunnyvale, CA **January 2025 – March 2025**
- Designed **soft deletion endpoints** in **Flask** for assets and feeds, reducing accidental data loss incidents by **30%** and improving backend reliability
- Built real-time **NLP microservices** using Whisper, MarianMT, and FFmpeg on **AWS**, reducing translation latency by **40%** and enabling scalable multilingual processing
- Implemented **RESTful APIs** and asynchronous processing pipelines to support scalable NLP services

Supermicro | *System Engineer (GPU Team)* | San Jose, CA **June 2024 – September 2024**
- Ported distributed training stack from **x86 to ARM-based server environment**, resolving deep driver-layer incompatibilities through systematic **kernel-level debugging** of x86 assembly intrinsics
- Optimized **LLaMA 3.1** training and inference pipelines using **LoRA fine-tuning**, increasing model accuracy by **30%** and automating data pipelines to eliminate **100%** of manual workflows
- Debugged **CUDA**, driver, and OS-level issues across multi-GPU servers, improving distributed training stability and system reliability by **40%**

Qualcomm Institute | *Software Engineering Intern* | San Diego, CA **January 2024 – June 2024**
- Integrated **Python** with Unreal Engine via **C++ plugins** to optimize solar modeling and environmental simulations

LearnWise AI | *Software Engineering Intern* | Remote, CA **October 2023 – December 2023**
- Built cloud microservices using **Golang**, **AWS Lambda**, and **API Gateway** to support scalable backend systems for real-time education tools
- Improved NLP system response times by optimizing **Go concurrency** and cloud-native service execution

PROJECTS

Mini AWS — Kubernetes, Minio, OpenFaaS, Argo, Prometheus, Grafana
- Built a **multi-node Kubernetes cluster** replicating core cloud services including object storage, serverless compute, and VM orchestration
- Implemented **GitOps CI/CD pipelines** with observability tooling (Prometheus, Grafana) for monitoring, scaling, and system reliability

KeycapVault — Python, MongoDB, Flask, JavaScript
- Built full-stack application with custom **web scraper** to automate product tracking, enable CRUD management, and compare collections against live listings

LEADERSHIP EXPERIENCE

Computer Science and Engineering Society | *Event Director* | San Diego, CA **September 2023 – June 2024**
- Directed 40+ technical workshops and mentorship initiatives impacting **500+** students; launched program increasing CS participation by **20%**

SKILLS

Languages | Java, Python, C, C++, Rust, Golang, JavaScript, Bash, HTML, CSS
Technologies | Kubernetes, Docker, React, Node.js, FastAPI, PostgreSQL, MongoDB, TensorFlow, PyTorch, Smithy
Software | AWS, GCP, Unix/Linux, Git/Github
